Projects

IMDb Financial Info

This website is designed to fetch the financial info of the top 250 movies from IMDb database using an API that fetches that info

Lyricify

This website is designed to fetch the user's song's lyrics from Vagalume database I used two different APIs for this website

Simon Game

The game tests your memory. When a button flashes you should click it; if you get it right, a new button flashes and you should remember the whole flashing sequence and click them in the correct order in which they flashed

Keeper App

A simple notes app that is divided to several components that utilizes the "useState" hook

Budget App

This app lets the user define their initial budget and insert their bought items then calculates the remainder

Weather App

This app shows the weather in a city defined by the user using an external API

**All these projects are hosted on netlify. For more info as well as the links to them, please click on the Github icon in the info section*
